

Reflecting on water stewardship collective action within the context of broader water governance

Setting the Scene

Stockholm World Water Week Seminar: Improving the Impacts and Effectiveness of Corporate Water Stewardship Initiatives 2 September 2014

Watersheds are everywhere... and important to everyone

Source: The Nature Conservancy

Business depends on (and impacts) watershed services

Provision of freshwater

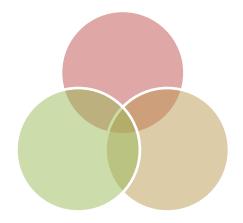

- Consumptive uses
 - Drinking
 - Domestic
 - Agricultural
 - Industrial
- Non-consumptive uses
 - Hydropower generation
 - Cooling water
 - Navigation

Flow regulation and filtration

- Stores water in soils, wetlands and floodplains which can buffer flood flows and drought
- Controls erosion and sedimentation
- Maintains river mouths and channels, wetlands, riparian habitats, fisheries, and other wildlife habitat
- Maintains mangroves, estuaries, reefs and coastal zone processes
- Controls the level of water tables
- Maintains water quality: nutrients and organic matter, pathogens, persistent organic pollutants, salinity, heavy metals, changes in thermal regime

Supporting services

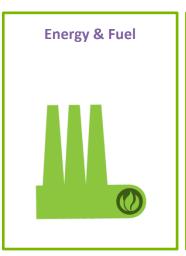

- Maintains natural flow and disturbance regimes as drivers of ecosystem processes
- Supports cultural and heritage values (e.g., aesthetic qualities) that support tourism and recreational uses and ways of life

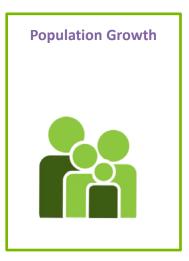

Global mega-forces <u>already</u> impact the health of the world's watersheds

Source: KPMG, 2012

Watershed challenges: Competing demands

Cities and surrounding regions where the population concentrates

Utilities which require water to operate power plants

Rural agriculture which needs water to grow food

Ecosystems which can help sustain and replenish water sources if protected

Source: Ernst & Young, 2010

- How to decide who gets how much?
- Potential approaches include
 - ✓ water markets
 - ✓ water funds
 - ✓ emission permit trading
 - ✓ payments for ecosystems
 - ✓ certification
 - ✓ green public procurement, taxes and fiscal incentives

Watershed degradation: Causes lead to impacts

Land use changes, e.g. urban encroachment, deforestation

Increased run-off, increased sedimentation, soil erosion, habitat loss, ecosystem impacts, flash flooding, reduced infiltration to groundwater, water quality deterioration and pollution

Unsustainable farming practices

Depletion of ground and surface water, ecosystem impacts, reduction in vegetation cover, soil compaction, reduced water infiltration rates, increase run-off, acceleration of soil erosion, pollution from fertilizers

Construction, e.g. roads, dams, levees

Alteration of natural hydrology, increased run-off, flash flooding, sedimentation

Invasive species

Changes to soil and water conditions, unstable soil conditions, increased evapotranspiration, loss of ecosystems

Changing climate, increasing temperature

Exacerbation of droughts, severe weather events, loss of species due to rising temperatures

Watershed solutions: Local and political

"Yes, there is scarcity in certain areas, but our findings show that the problem overall is a failure to make efficient and fair use of the water available in these river basins. This is ultimately a political challenge, not a resource concern."

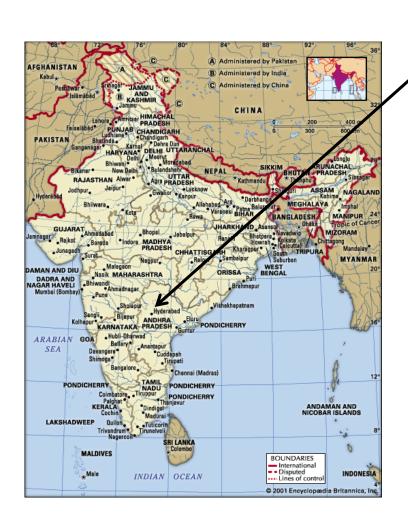

- Alain Vidal, CPWF

"The basin perspective is critical in order to assess the upstream and downstream impacts of water allocation policies, and to determine opportunities for optimizing the sum of benefits across many residents."

- Dennis Wichelns, IWMI

An example in collaboration

Pothireddypalli

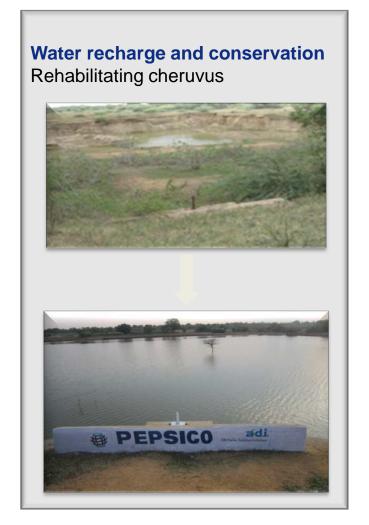

- Groundwater is an important source for agriculture and domestic use
- Economy relies on water-intensive crops
- Silting of cheruvus impedes natural recharge

PepsiCo India engaged **Alternative Development Initiatives** to establish a sustainable water development model

The SWRDM approach combines community interventions for water resource development with livelihood enhancement, so it is *inherently community-focused*

Initiatives and achievements

Community engagement

Capacity building

- On-field water management
- Multi-cropping

Livelihood enhancement

- Reduce dependence on single annual crop

Diversified farm package: horticulture, vegetable gardening, ...

Community & gender empowerment

 Women's self-help groups leading to micro-capital, mobile banking

 Formation of local institutions including Water Users' Association, Joint Farmer's Club
